

Notice to Fleet: Corrected Results Posted

Thank you for your patience as we worked through the Forecast Time Correction Factor (FCT-F) scoring issue identified in the preliminary results.

Since this morning, the Bermuda Race Organizing Committee (BROC) has been working closely with the third-party providers involved in generating the FCT-F calculations, including the US Sailing Offshore Office and Expedition. Together, they identified the discrepancies, re-ran the calculations for every boat individually, and verified the corrected results.

The corrected results are now available at bermudarace.com/results.

This issue was unrelated to the race management system and scoring platform powered by Nautical Cloud. Rather, it originated in the FCT-F calculations that were generated prior to being imported into the scoring system on Friday morning. Through the investigation, it was determined that an issue existed within Expedition's fleet-processing mode that resulted in incorrect calculations for a number of boats. Once the anomalies were identified, the US Sailing Offshore Office re-ran the FCT-F calculations for every boat individually and verified the results.

While it is unfortunate that this issue was not identified prior to the publication of preliminary results, we appreciate the efforts of the US Sailing Offshore Office and Expedition in quickly identifying the source of the problem and working diligently to verify corrected calculations for the entire fleet. We would also like to thank Nautical Cloud for its assistance in promptly updating and publishing the corrected results once the verified calculations were provided.

As a result of these corrections, some standings have changed from those reflected in the preliminary results.

At the end of the day, we thank all competitors for their patience, understanding, and cooperation throughout this process. Most importantly, we congratulate every sailor who successfully completed this year's Newport Bermuda Race and navigated the challenging conditions on the passage to Bermuda.

BROC will continue to work with its partners to better understand how this issue occurred and to ensure the integrity and accuracy of future scoring processes.
